

*Hidden Risks of
Aging Electrical Systems*

Agenda

- What Is That Grey Box?
- Electrical Equipment Life Expectancy
- Electrical Equipment Life Risk Factors
- Arc Flash Awareness
- Potential Mitigation Actions

Electrical Systems Are Vital But Often Unrecognized Infrastructure

- **What are those grey boxes anyway?**

Improper Uses of Electrical Equipment Rooms

Break Room?

Storage Room?

- Lack of recognition and respect of electrical equipment has risks

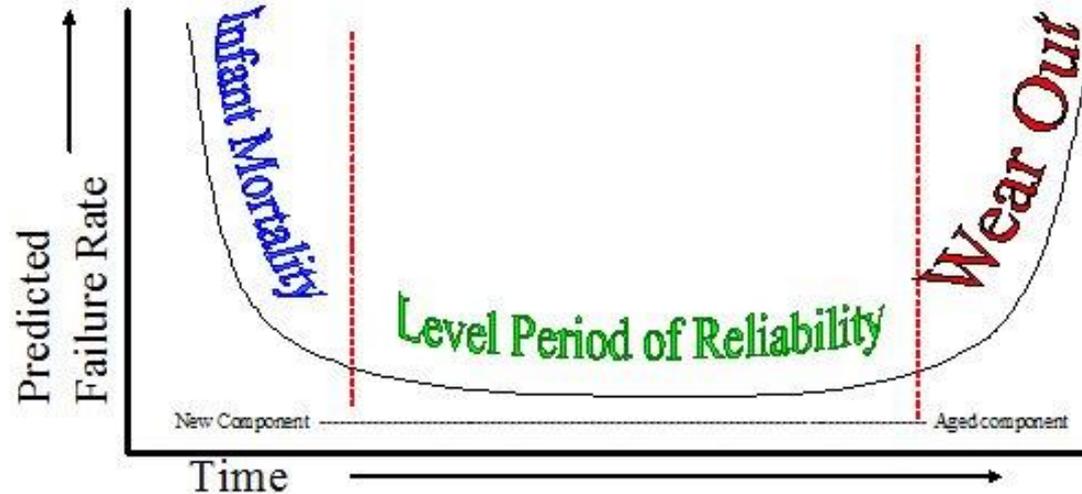

Electrical Equipment Life Expectancy

How Long Does Electrical Equipment Last?

Component Life Cycle Reliability

Bathtub Curve

Typical Electrical Equipment Life Expectancies

EQUIPMENT	EXPECTED USEFUL LIFE, YEARS
Capacitors	17
LV molded case circuit breakers	20
LV power circuit breakers	15 - 20
MV power circuit breakers	15 - 20
MV vacuum circuit breakers	15 - 20
Dry- type transformers and reactors	20
Liquid filled transformers	30
LV and MV cables	20
Protective relays	Not stated
Motors and motor starters	20 - 30
VFDs and UPSs	20

Reference IEEE Gold Book
(Recommended Practice for the Design of Reliable Industrial and Commercial Power Systems)

Can Electrical Equipment Operate Reliably Beyond Normal Life Expectancy?

**Administration Building
Downtown Raleigh
1966 Westinghouse
Low Voltage Switchgear**

- Regular maintenance, optimal loading, and clean environment can extend equipment life.

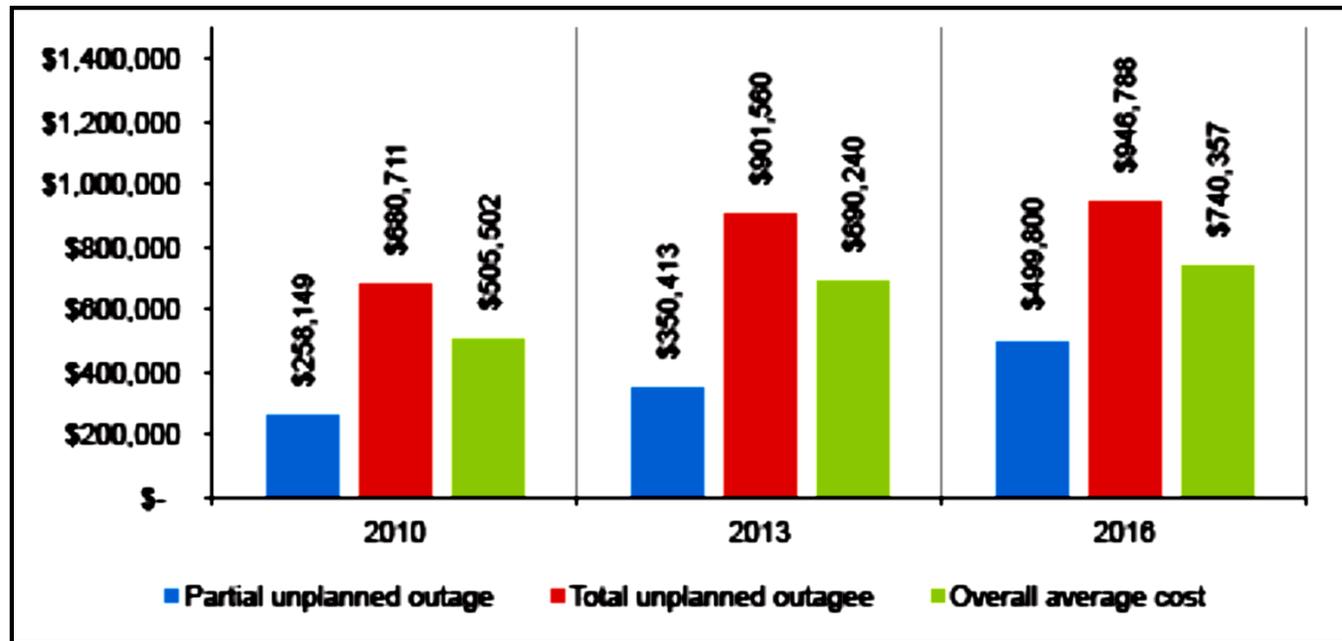

Aging Electrical Infrastructure Risks

- Reduced equipment reliability
 - Equipment operating at available fault levels exceeding equipment rating
 - Equipment damage & personnel injury
 - Unrecognized hazard or hazard greater than anticipated
 - Electrical shock, electrocution, or arc flash
 - Unscheduled outages
 - Financial costs of emergency repairs, rental equipment, regulatory fines, and liability awards
- **Yes, it is still in operation!**

Risks are unfortunately not realized until actual failure occurs.

Data Centers Electrical Outage Financial Impact

Ponemon Institute 2013-2016 Survey:
Cost of Data Center Outages

Greatest root cause of unplanned data center outages?
- UPS system equipment failure

Electrical Equipment Life Risk Factors

Aging Electrical Equipment Failure Causes

- Utility available fault current changes
- Excessive loading, harmonics, surges
- Inadequate documentation
- Improper operation under current electrical codes, standards, regulations
- Lack of preventative maintenance
- **Environmental degradation**

- Electrical equipment asset management should be a priority for facility owners.

OSHA 46 CFR 183.210

Protection From Wet/Corrosive Environments

- Electrical equipment use in the following spaces must be dripproof:
 - Machinery spaces
 - Space exposed to splashing, washdown
- Electrical equipment exposed to weather must be watertight
- Electrical equipment exposed to corrosive environments must be of suitable construction and **resistant to corrosion**

- **Rainproof?**

Corrosion Coupon Measurements

Example Adverse/Corrosive Contaminants

- Hydrogen Sulfide
- Sulfur Dioxide
- Ammonia
- Chlorine
- Chlorinated Compounds
- Salts
- Moisture/Water

Corrosion is *accelerated* by increased concentration of contaminants, elevated temperature and high humidity.

Components/Wiring Internal To “Protected” Enclosure

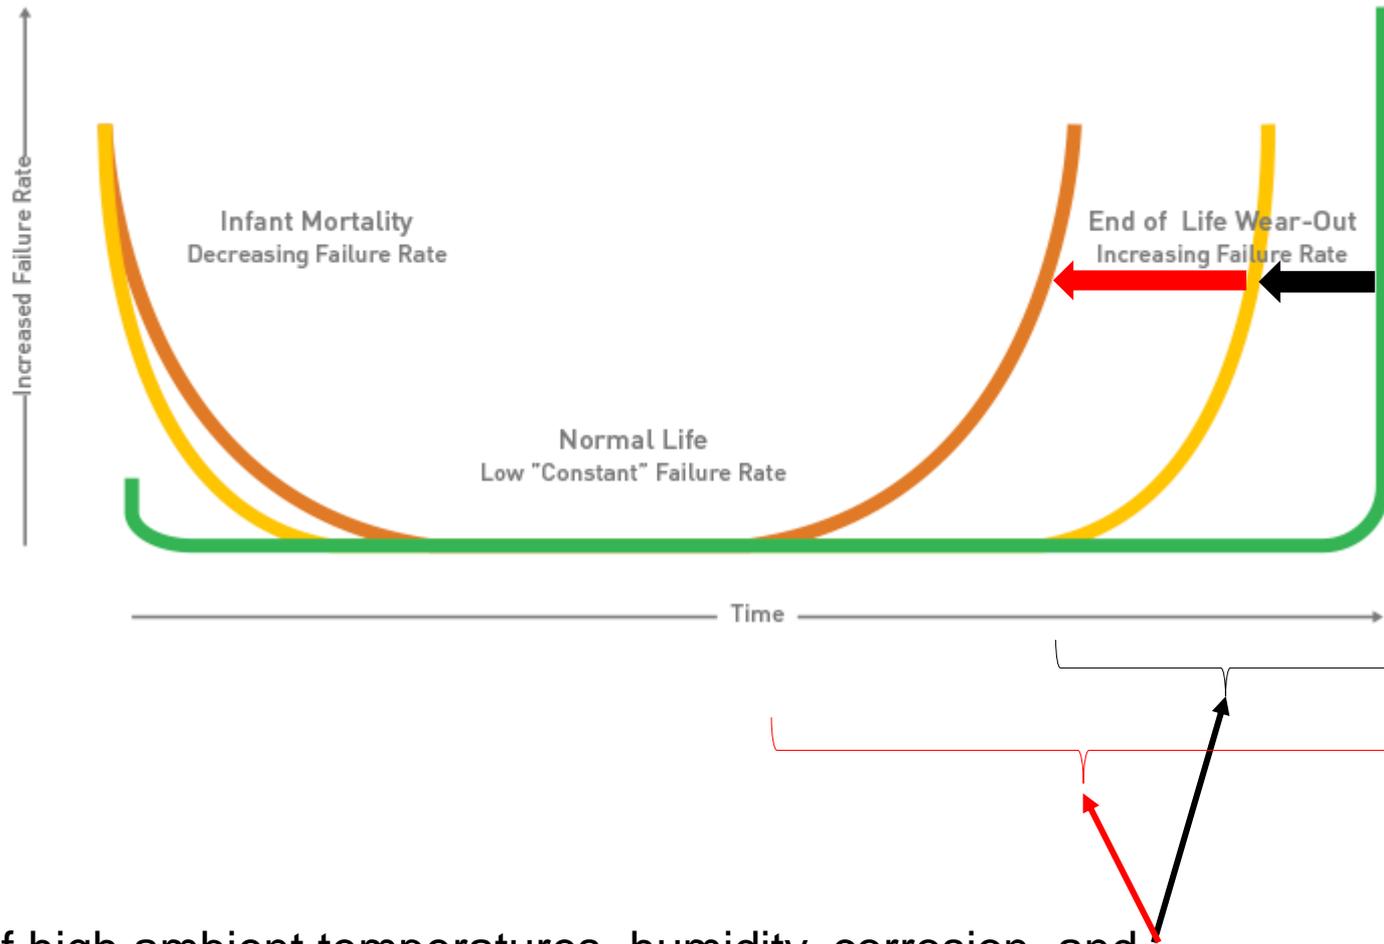

- Internal corrosion conditions occur undetected unless routine inspections are implemented

Silver Plated Terminals/Bus

Corrosion can affect protective equipment clearing time including “no trip” failure mode

How Many Installations Are Gambling Upon “Wear Out” Time?

- Affects of high ambient temperatures, humidity, corrosion, and lack of maintenance upon hastening end-of-life.

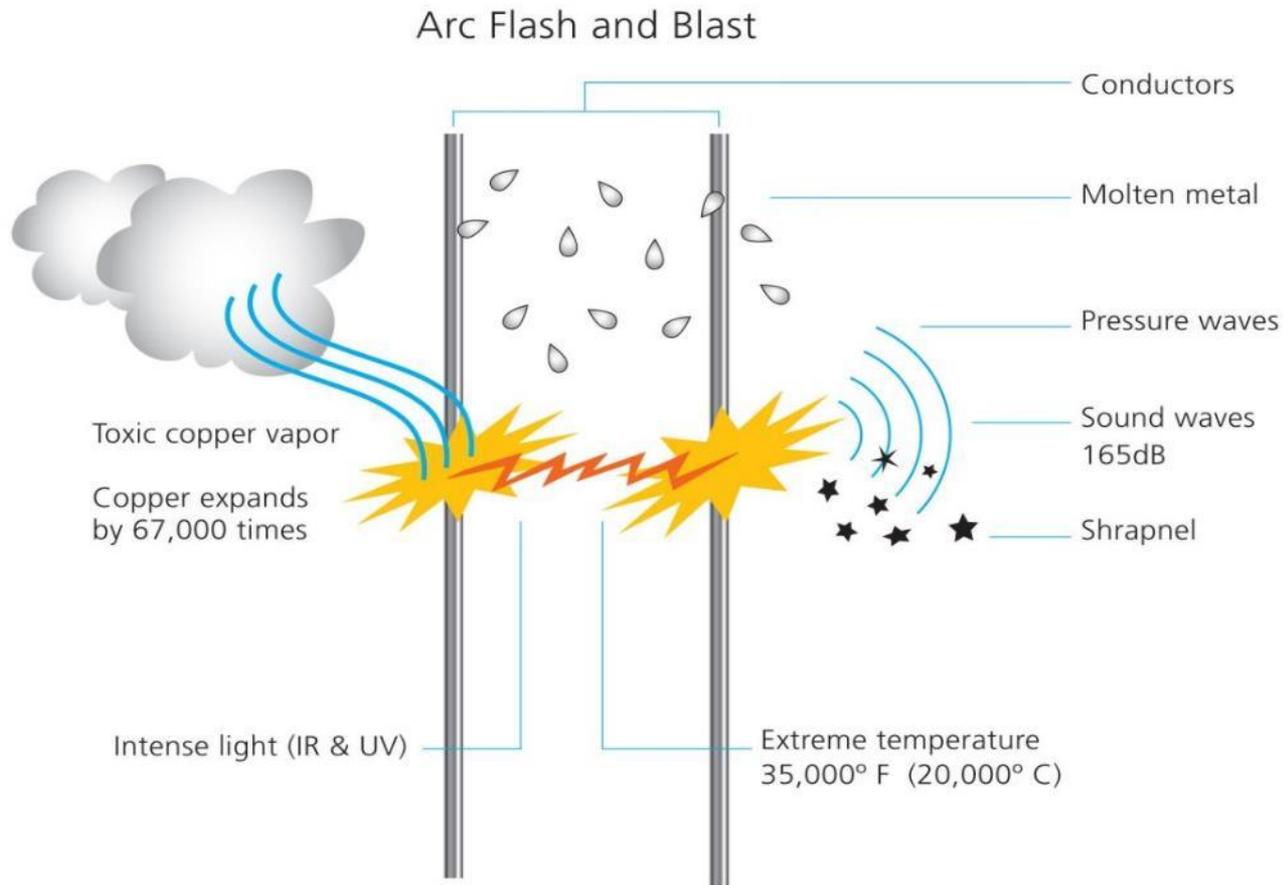

Arc Flash Awareness

Arc Flash Video - Molten Metal, Intense light

Arc Flash Basics

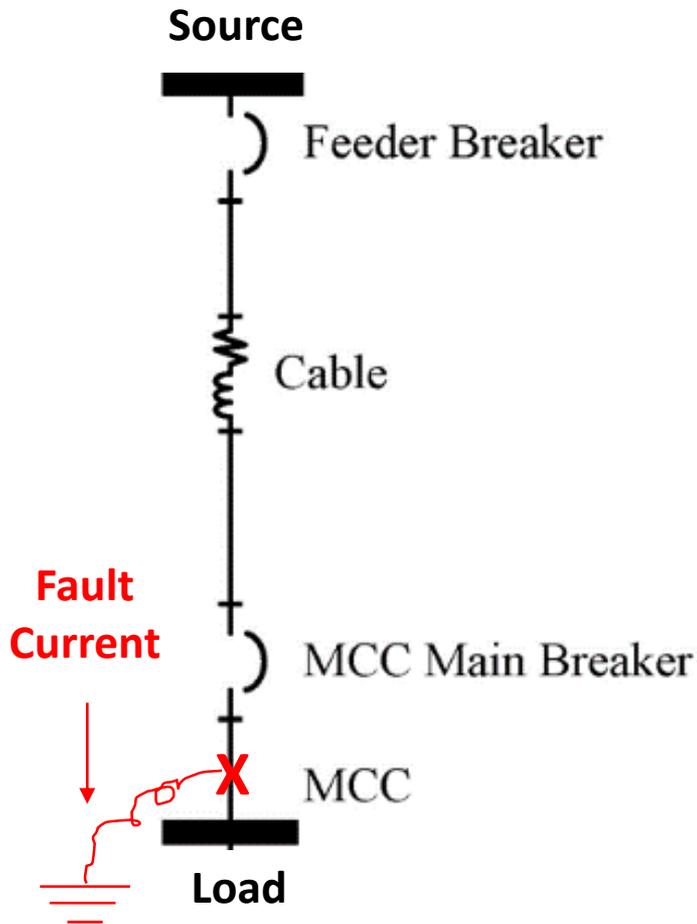

An arc flash produces shock wave, molten metal, intense light, and heat exposure

Arc flash Examples – Shock Wave, Molten Metal, Intense Light, Heat

Calculating Arc Flash Incident Energy

- Incident Energy based on:
 - Available fault current
 - **Protective device clearing time**
 - Working distance away from the equipment

- Accurate available utility fault current level and actual protective device settings are critical.

Personal Protective Equipment (PPE)

Hazard/Risk Category
4 cal/cm²

1

Arc-rated long-sleeve shirt
Arc-rated pants or overall
Arc-rated face shield with hard hat
Safety glasses
Hearing protection
Leather & voltage rated gloves (as needed)
Leather work shoes

Hazard/Risk Category
8 cal/cm²

2

Arc-rated long-sleeve shirt
Arc-rated pants or overall
Arc-rated face shield & balaclava or
Arc flash suit with hard hat
Safety glasses, Hearing protection
Leather & voltage rated gloves (as needed)
Leather work shoes

Hazard/Risk Category
25 cal/cm²

3

Arc-rated long-sleeve jacket
Arc-rated pants
Arc-rated flash hood with hard hat
Safety glasses, Hearing protection
Leather & voltage rated gloves (as needed)
Leather work shoes

Hazard/Risk Category
40 cal/cm²

4

Arc-rated long-sleeve jacket
Arc-rated pants
Arc-rated flash hood with hard hat
Safety glasses, Hearing protection
Leather & voltage rated gloves (as needed)
Leather work shoes

80% electrical injuries are **burns** from exposure to **arcing fault**

Federal Register Vol 79 #70 4/11/2014

*OSHA estimates on average, **74 fatalities and 444 serious injuries** occur annually among employees performing work involving electric power generation, transmission, and distribution.*

2,000 workers – number admitted annually to burn centers for extended injury treatment from arc fault energy exposure

Reference IEEE Report

Governing Arc Flash Regulations and Standards

- OSHA Standards 29 Code of Federal Regulations,
 - Part 1910 General Industry
 - Part 1926 Construction Industry
- NFPA 70 - The National Electrical Code (NEC)
- NFPA 70E (2012) - *Standard for Electrical Safety in the Workplace*
- IEEE Standard 1584 (2002) *Guide to Performing Arc Flash Hazard Calculations*

- Arc flash regulations **apply to existing facilities** not just new construction

Standards Information and Activity

The status of OSH adoption of federal standards is below. The links will access the Federal Register document or a page with additional information about the subject on the federal OSHA or the NCDOL web site.

Agriculture

There are no agriculture standards being reviewed at this time

Construction Industry

29 CFR 1926 Various Subparts - Electric Power Generation, Transmission, and Distribution; Electrical Protective Equipment; Final Rule - The OSH Division reviewed this rule and will adopt it verbatim. The effective date was October 8, 2014.

General Industry

29 CFR 1910 Various Subparts - Electric Power Generation, Transmission, and Distribution; Electrical Protective Equipment; Final Rule - The OSH Division reviewed this rule and will adopt it verbatim. The effective date was October 8, 2014.

NCDOL adopted 29 CFR 1910 effective *October 8, 2014*

*Federal Civil Penalties
Inflation Adjustment Improvements Act of 2015*

Maximum allowable penalties for OSHA citations:

	<u>Prior to 2016</u>	<u>Effective 2016</u>
• Other Than Serious	\$1,000	\$1,500*
• Serious	\$7,000	\$10,600*
• Willful	\$70,000	\$106,000*

* OSHA penalties now indexed (CPI) for inflation

OSHA Standard 29 CFR Part 1910 General Industry – Electrical Power Generation, Transmission, & Distribution

All employers shall be responsible for:

- *Risk Assessments to Employees* **no later than January 1, 2015**
- *Electrical Hazard Classification* **no later than April 1, 2015**
- *Personal Protective Equipment* **no later than April 1, 2015**
- *Host – Contract Employer Responsibilities*
- *Information Transfer/Minimum Documentation*

Amongst Affected Industries Include **Educational Facilities**
and **Hospitals** *Federal Register 4/11/2014*

Potential Mitigation Measures

Implement Electrical Asset Management Program

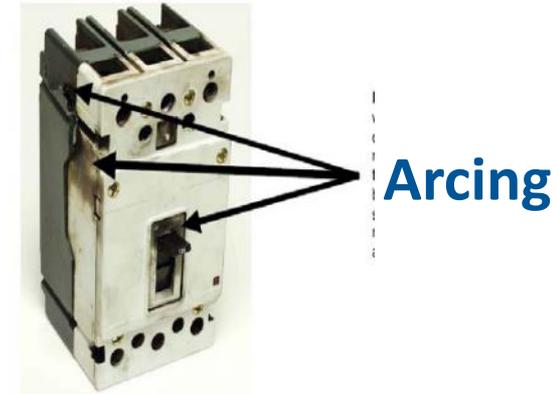

- Identify installation age
- Collect O&M info
- Regular inspection
 - Signs of arcing or flash
 - Search broken parts, loose hardware (e.g. bolts on the floor)
- Cleaning and lubricating
- Confirm anchorage, alignment, grounding

- Confirm organizational maintenance philosophy and contract for those tasks designated as undesirable

Consider Thermal Inspection Program

Remove and replace equipment from service based upon infrared scan results

Implement Inspection and Maintenance Program

“Circuit breakers should be cycled ON-OFF *at least every 6 months*” – ANSI/NEMA AB 3

Corrosive Environment Mitigation

Example 1 of 2

Where unable to locate electrical equipment in “clean” areas then consider mitigating corrosive gas penetration

Corrosive Environment Mitigation

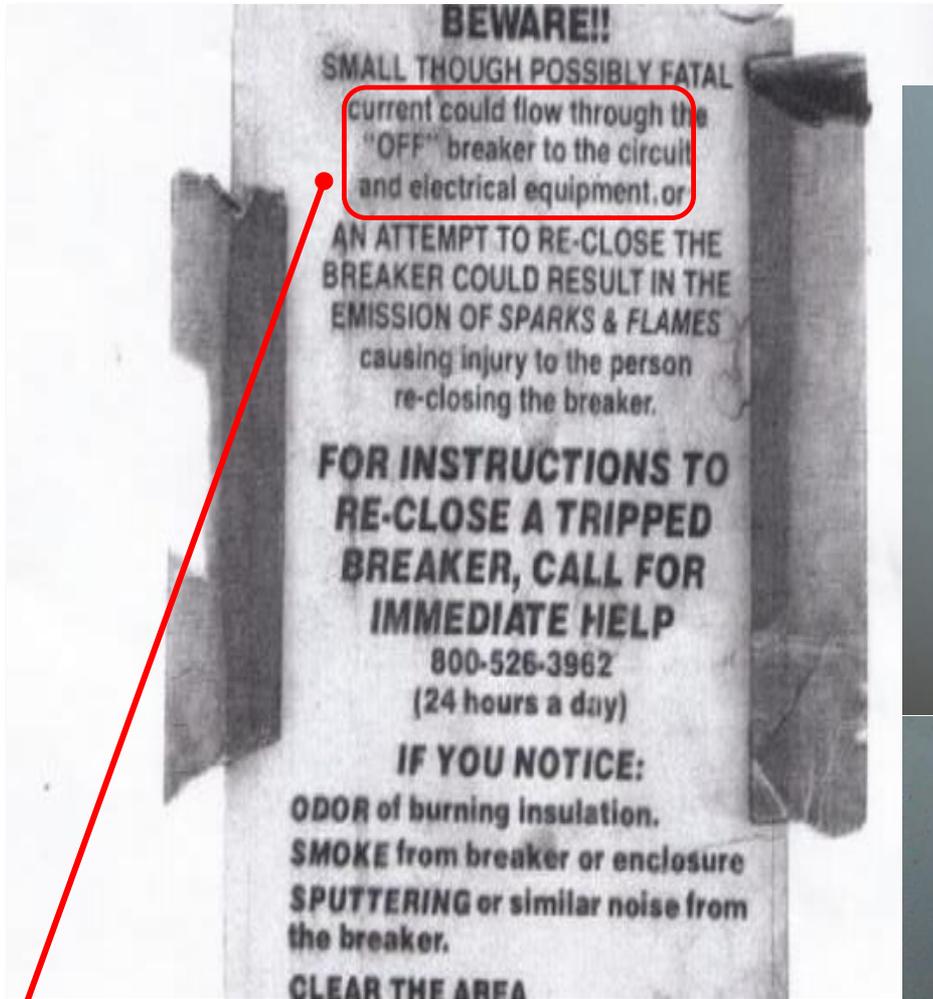

Example 2 of 2

Where unable to locate electrical equipment in “clean” areas then consider mitigating corrosive gas penetration

Replace Recalled and Legacy Equipment

- “Do not reclose...current could flow through the ‘OFF’ breaker...”

Upgrade In Place

Aging and Obsolete Electrical Equipment

- Economical upgrade for older switchgear
- Modernizes circuit breaker technology
- New operating and racking mechanisms
- Improved electrical system reliability

Switchgear Cubicle

Breaker Carriage

Before

After

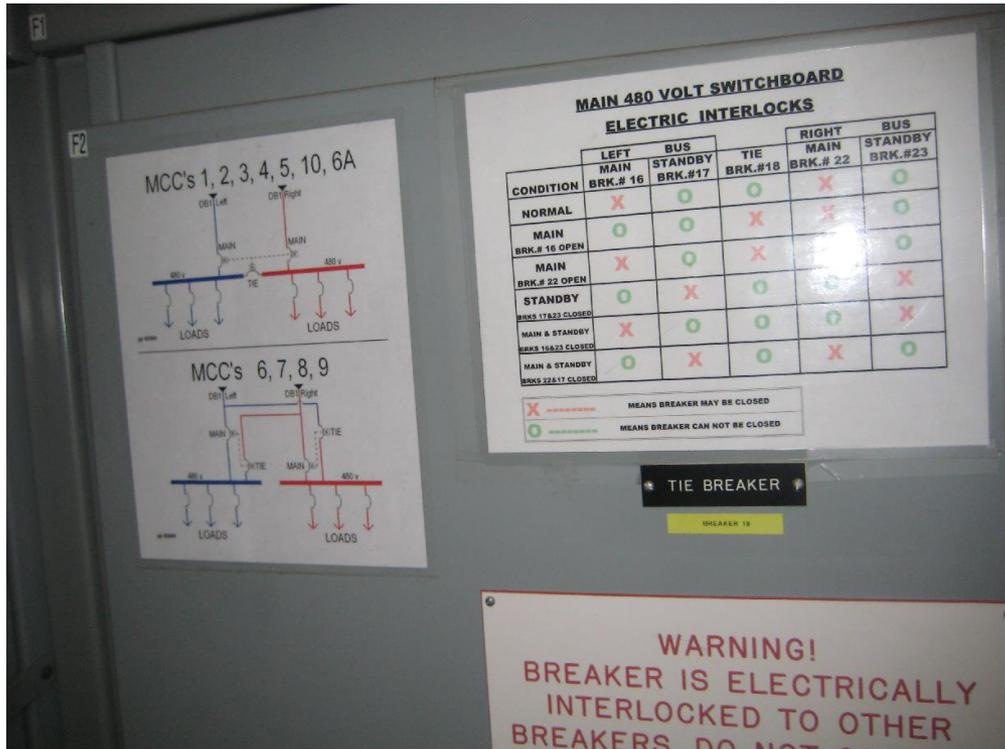

Passive components (bus, terminals, structure) remain while replacing ***active*** components

Optional Electrical Accessory Enhancements

Infrared viewing windows and remote breaker operating/racking mechanisms

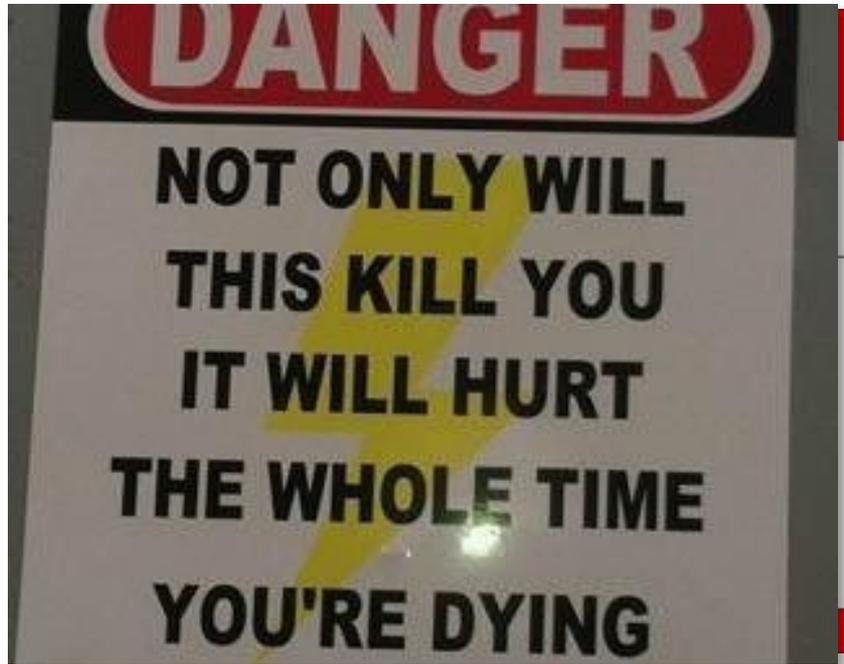

Prominently Post Accurate Documentation Records

- Commit to maintaining documentation accuracy subsequent to future modifications

Commit to Implementing Arc Flash Hazard Awareness

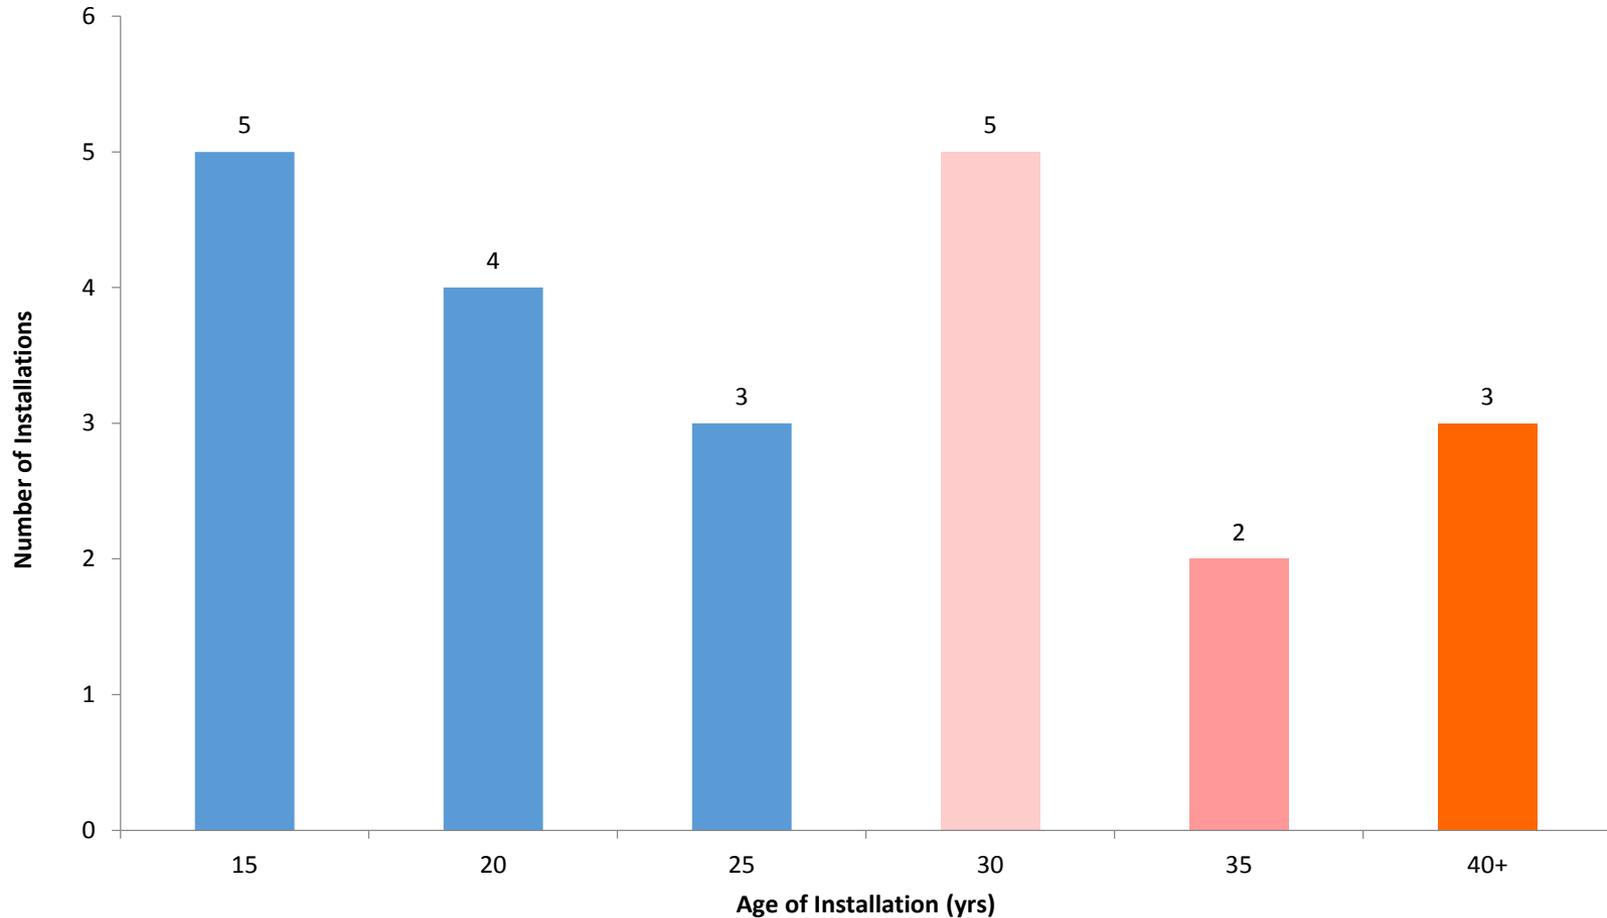

- Target new employees as well as frequent refresher sessions scheduled regularly for all personnel
- Clearly identify “qualified” and “non-qualified” personnel
- Keep arc flash hazard analysis up to date with system modifications and utility changes.

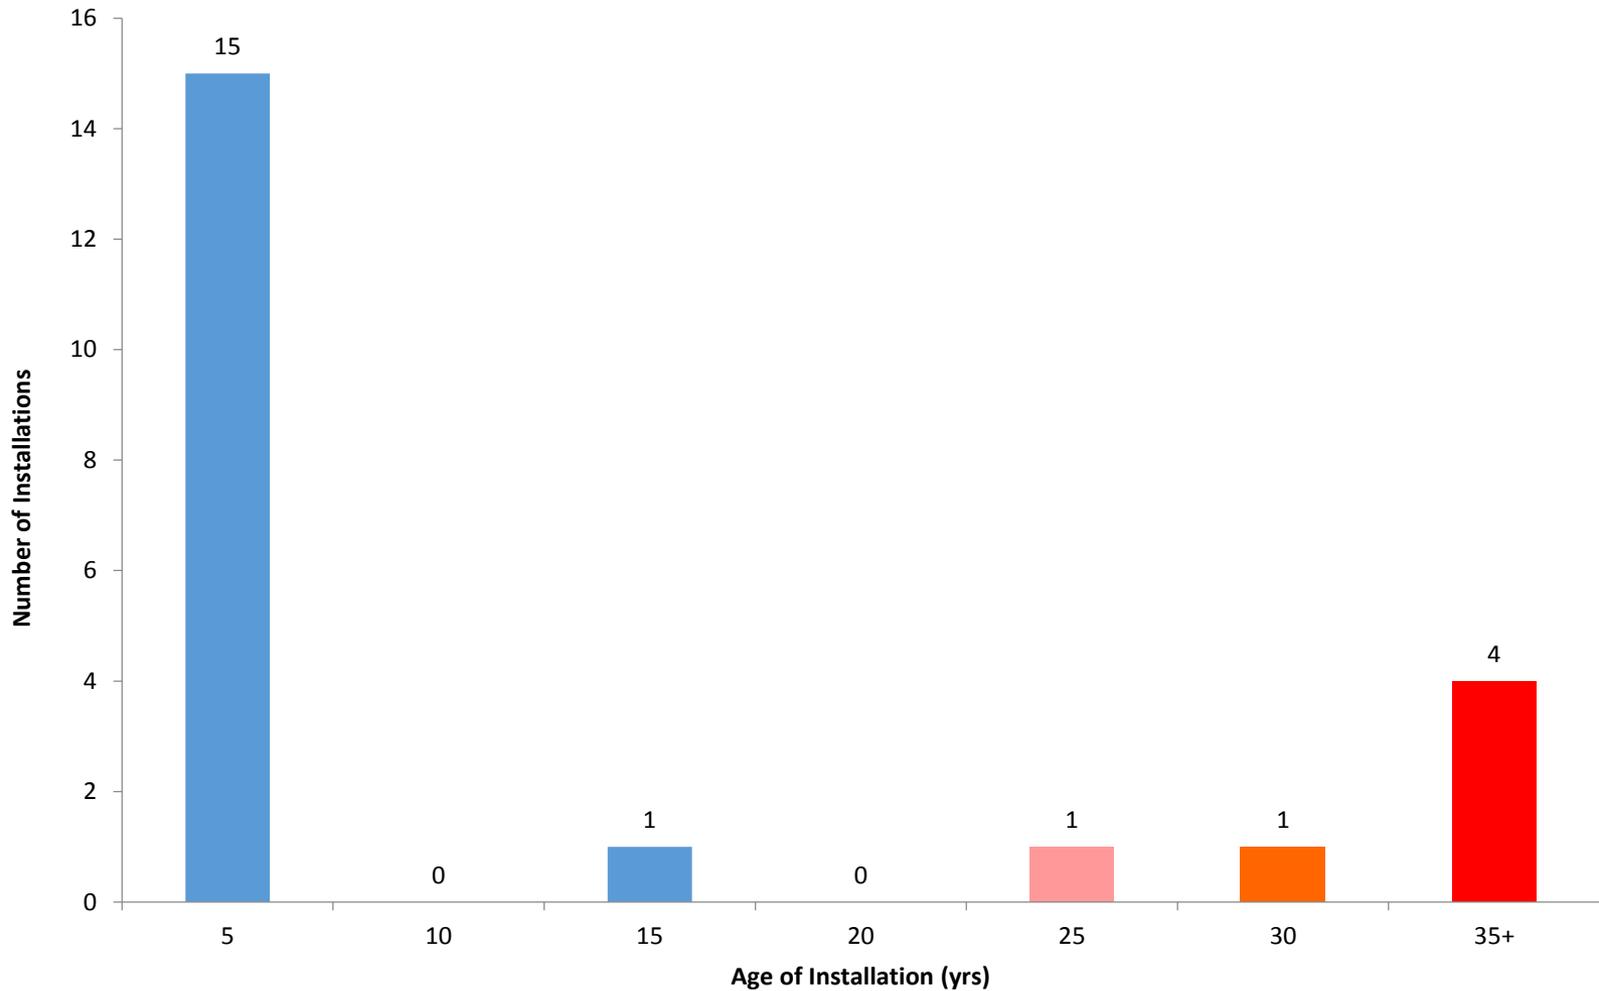

Downtown Raleigh NC Government Complex 2004 Assessment

NC Government Complex

- **>80%** electrical facilities exceed 20 years of installation age

Downtown Raleigh NC Government Complex 2016 Assessment

- **< 25%** electrical facilities exceed 25 years of installation age

Conclusions & Recommendations

Considerations for Addressing Aging Electrical Infrastructure Systems

- Implement asset management program w/ electrical system focus
- Establish regular preventative maintenance program
- Maintain arc flash hazard analysis & protective device study
 - Update with system changes or service utility changes
- Maintain accurate system documentation
- Monitor electrical equipment environment
- Consider enhanced accessories infrared windows, remote racking

• Continuing to ignore the risks of aging electrical infrastructure should no longer be accepted practice!
